Clinerion's Unique Network Continues to Expand Its Global Footprint!

Clinerion's hospital network is unique in being updated in real-time, unique in having the only truly global footprint, and unique in operating exclusively with anonymized patient data - while our patented Anonymized Identification (ANID) technology still allows authorized hospital trial staff to reach down to the individual patient and physician in their own hospital.

Over the past two months, we have been pleased to welcome new partner sites to our hospitals network, expanding our unique global footprint:

Precision Medicine-Hospital Information System Development Group of Korea University Medical Center, Seoul, South Korea.

Clinerion has signed a Memorandum of Understanding with the P-HIS Development Group of Korea University Medical Center (KUMC) to support KUMC's activities in developing a patient data platform in the Republic of Korea, in particular for precision medicine. Clinerion's contribution will involve implementation and use of our Patient Network Explorer solution.

First Hospital, Tbilisi, Georgia.

First Hospital, Tbilisi, becomes the first hospital in Georgia to join Clinerion's global network of hospitals. The hospital is considered one of the best sites in Georgia by contract research organizations (CROs) running clinical trials due to the quantity of screened patients.

The University Hospital Center Zagreb, Croatia.

The University Hospital Center (UHC) Zagreb brings 1.3 million patients to Clinerion's network of hospitals, expanding its global footprint into Croatia. UHC Zagreb has 1,800 beds. The hospital conducted 51 clinical trials in 2016 and 61 in 2017. It has 39 Principal Investigators and an additional 120 doctors working on trials.

The Clinerion Team is Growing!

Welcome, Mimi Choon-Quinones, PhD, MBA, our new Senior Director, Strategic Customer Solutions!

We're very happy to have Mimi join our team! Her vast experience in the pharma space will help Clinerion help pharmaceutical clients with our powerful patient data solutions.

"My vision is to improve health as a whole through building relationships with patients, pharmaceutical companies, healthcare professionals, and patient advocacy groups. I do this for patients by applying scientific rigor, medical ethics, advancing medical knowledge, driving innovative, digital solutions, and the utilization of electronic health medical records and real world evidence in the quest to increase medical accessibility to treatments for all patients.

"I am driven on a daily basis and feel it is my personal responsibility to support every patient who does not

have access to medicines."
