Global Expansion in Clinerion's Network!

We are continuing to expand the scope of our activities through partnerships with other service providers and hospitals. This newsletter, we are thrilled to announce two collaborations which will significantly expand the services we can offer and bring value to our clients. We are also very pleased to announce two new hospital clusters joining the Clinerion's Patient Network which expand our footprint into Greece and in Romania. We are targeting many more partnerships to come in the next few months - stay tuned for announcements as they come!

Clinerion and Patient iP Team Up to Globalize Access to Real World Data for Clinical Trial Applications.

PATIENT*i*P

Patient iP is a health data and analytics company providing patient data insights to accelerate and transform clinical research within the United States. The companies will collaborate using Clinerion's intelligent, patented Patient Network Explorer platform and Patient iP's proprietary daTAscape asset to better target clinical trial sites and accelerate trial enrollment on a global scale.

Clinerion and Semicrol integrate Patient Network Explorer and Fundanet CTMS to enable end-to-end clinical trial management.

The partnership will integrate patient data throughout the clinical trial process, from planning to reporting of results, encompassing the functionality of Clinerion's Patient Network Explorer and Semicrol's Fundanet Clinical Trials Management System (CTMS). The collaboration will give clinical trial sponsors and managers unified tools to manage trial data and workflows throughout the clinical trial process, from planning to reporting of results.

Research Networks in the Digital Healthcare Environment: A Review (Journal for Clinical Studies)

Publication date: August 28, 2018

We were thrilled to be invited to contribute to the Journal for Clinical Studies on how data-driven EHR-based analytics can support the work of research networks.

"Teaching hospitals and academic institutions which band together to conduct research reap the benefits of the increasing digitalisation of healthcare. In this article, we examine the attendant benefits and challenges, with particular focus on electronic health records and the privacy issues relating to patient data. We review the permissions-based sharing model for patient data as an optimal solution which allows flexibility in adapting the individual hospital's digital infrastructure to the challenges and needs of different types of research networks and projects."

Job opening: Data Integration and Processing Engineer (Junior)

The Data Integration and Processing Engineer (Junior) will support the installation team in connecting hospitals to the Patient Network Explorer. You will extract data from different kinds of databases installed in various healthcare organizations located all over the world and sending it to other systems via webservices using clients. You would be communicating with developers from our partner organizations to understand the database/messaging structure and then extracting the data.
