

PRESS RELEASE

Basel, Switzerland, February 26th, 2019.

Clinerion partners with MEDSOFT on expanding clinical research in Georgia.

MEDSOFT.GE
HOSPITAL INFORMATION
SYSTEM

Clinerion will offer its services to hospitals in Georgia, bringing them access to international clinical studies and the use of Patient Network Explorer for academic research. Georgian Medical Software – MEDSOFT, an EHR supplier, will support Clinerion in expanding its footprint in Georgia.

Georgian Medical Software – MEDSOFT, an EHR systems supplier with 10 years' experience in eHealth in Tbilisi, Georgia, supports hospitals and the medical community with innovative technology and dedicated services. More than 40 hospitals and medical centers in Georgia use MEDSOFT's software. Their MEDWORK hospital information system (HIS) is integrated with the Georgian Ministry of Health, financial systems, and laboratory information systems, allowing costless and effective information management for the healthcare community.

As part of their partnership, MEDSOFT will support Clinerion in integrating hospitals in Georgia in Clinerion's international network of partner hospitals on its Patient Network Explorer platform.

In turn, MEDSOFT hospitals will be able to use Patient Network Explorer's real-world data solutions when running academic research. They will gain sophisticated tools to query their own HIS, allowing them to review and optimize protocols, and find and identify eligible patients for trials within their own hospitals. Joining the Patient Network Explorer platform will also make these hospitals visible to pharmaceutical companies seeking trial sites for clinical research of drugs in development.

"Our System, MEDWORK, was developed with an easy-to-use interface and has the functionality and capability to fully provide support for the processes of receiving, keeping and processing data in any type of medical institution," says Archil Kapanadze, CEO of MEDSOFT. "This system uses latest and renewable programming technologies. We provide about 25% new features and capabilities annually for our customers."

"As a HIS provider with a strong presence in Georgia, we consider MEDSOFT an important partner in our expansion in the region, enabling Clinerion to reach more patients" says Ian Rentsch, CEO of Clinerion. "Added to that is their strong technology capability, which ensures smooth integration of new hospital partners to Patient Network Explorer."

About Clinerion

Clinerion accelerates clinical research and medical access to treatments for patients. We use proprietary technologies for analysis of patient data from our global network of partner hospitals. Clinerion's Patient Network Explorer radically improves the efficiency and effectiveness of clinical trial recruitment by offering data-driven protocol optimization, site feasibility evaluation and real-time patient search and identification to match patients to treatments. Our technology solution provides real-world evidence analytics for medical access. Clinerion facilitates the participation of partner hospitals in leading-edge, industry-sponsored trials and time savings in patient recruitment. We create innovative and disruptive fit-for-purpose solutions which enable pharmaceutical companies to shorten patient recruitment and save costs by streamlining operations and leveraging strategic intelligence. Clinerion's proprietary Big Data analytics technologies leverage real-time data from electronic health records which comply with international patient privacy and data security regulations. Clinerion is a global data technology service company headquartered in Switzerland.
