

## System Integration Project Manager (100%)

### We want you!

Looking for a small technology-leading company where **you can make a big difference in an exciting and rapidly evolving field**? Welcome to Clinerion, a Swiss-based software and services company with international operations, with a focus on improving patients' lives. Clinerion provides disruptive software solutions supporting life sciences companies and hospitals in the process of developing new medicines.

One of our key solutions is the Patient Network Explorer (PNEx), which automatically finds eligible patients for clinical studies in hospitals and other healthcare organizations. In drug development, this addresses a major problem of finding significantly more eligible patients faster and at lower costs. PNEx works through integration with electronic health records at hospitals and represents a federated network of servers, allowing central querying and local patient identification. PNEx also generates data for Real-World Evidence.

To strengthen our existing PNEx installation team in Basel we are currently hiring a **System Integration Project Manager**. The applicant preferably lives within commuting distance from Basel. This position is open to start immediately or upon agreement.

### Job description:

You will lead system installation projects for connecting hospitals to the PNEx. In this role you will closely collaborate with IT teams of hospitals and their providers of Hospital Information Systems (HIS) located around the world.

You will be given the responsibility for project set up and will assume installation accountability for the PNEx in the hospital.

### Tasks:

- Deliver project end-to-end installations from kickoff, supervising the installation process and final handover to user.
- Primary responsibility to deliver the project on approved schedule, budget and within quality standards.
- Prepare and maintain master project plan and detailed planning.
- Ensure that project scope is covered and handled consistently across the team, assigning clear responsibilities.
- Align and integrate the various streams in the project organization; facilitate issue management and drive resolution.
- Identify all relevant project stakeholders and to establish and implement an appropriate communication plan to manage the requirements and expectations.
- Apply state-of-the-art project management standards.
- Prepare routine status and progress reports.
- Establish effective project planning and cost control.
- Lead lesson-learned workshops and foster organizational learning.
- Actively manage risks, assumptions, issues and dependencies by carefully assessing potential impacts in collaboration with the project team and proposing appropriate mitigation actions.

### Requirements include:

- Completed study in the field of IT or natural sciences.
- At least 2 years of project management experience in the IT environment, focusing on implementation projects, typically in the area of healthcare.
- Project Management Certification is preferred.
- Ability to work independently or as part of a team. Effective interpersonal and communication skills.
- Ability to thrive in a dynamic and international environment.

- Experienced in working with data in health care, medical data standards, ontologies, controlled vocabularies are desired.
- Curious and open-minded, autonomous, and enjoy working in a team. Strong analytical capacity and desire to take charge of the realization of human and technical projects in a dynamic and proactive way.
- Excellent English language skills are a must, additional languages are a plus.
- Applicable Swiss or EU work and residence permits.
